RESEARCH INTERESTS

Industrial Organization, Institutional Economics, and International Business, with a focus on transaction cost economics, contract design, asset specificity, and firm governance in global value chains.

SKILLS

Project Management

Business Analytics

Machine Learning

Data Analytics

PROFESSIONAL EXPERIENCE

**DIRECTOR — JACK MACHINERY
BANGLADESH**

2024 – Present

- Oversees operations, market strategy, and technology adoption

PRODUCT MANAGER — UNITY LABS

2020 – 2021

- Orchestrated cross-border software delivery by aligning international buyer requirements with Chinese technical execution to ensure seamless product deployment.

EDUCATION HISTORY

**Chinese Language And
Masters Of World Economy**

September 2021 -July
2024

Beijing Normal University

- Focus: International economics, firm behavior, and global value chains
- Thesis: Machine Learning Approaches to Measuring Asset Specificity in Economic Transactions

**Bachelors in
Computer Science**

Sep 2016 -July 2020

South China University Of Technology

- Web Development Certificate from London app brewery.
- President of the graphics designer student's Club Staff
- President of the International Student Government

LANGUAGE SKILLS

CHINESE

Fluent

- Fluent in speaking and writing.

ENGLISH

Fluent

- Fluent in speaking, writing and reading

BENGALI

Fluent

- Fluent in speaking, writing and reading.

RESEARCH

Master's Thesis

Machine Learning

Approaches to Measuring Asset Specificity in Economic Transactions

- Developed Random Forest classification model to quantify asset specificity
- Used transaction-level financial and operational data
- Found transaction frequency to be the strongest predictor
- Bridges machine learning with transaction cost economics

Working Paper 1

Contractual Safeguards, Asset Specificity, and Transaction Frequency

- Methods: K-means clustering, log-log regression, multinomial logit
- Contribution: Shows contractual clauses reshape AS-FOT relationship

Working Paper 2

Hard vs Soft Asset Specificity in Global Value Chains

- Introduces multidimensional asset specificity
- Shows divergence between production-based and relational governance
- Highlights institutional moderation effects
